Patent and Product Overlap Table

Generated by Autonomous Taxonomy Intelligence Agent

Workspace Run ID: 20a7033b

Executive Summary: *This document provides a comprehensive overview of the overlapping patents with the Totalenergies-European Product Range-2025 - Medical product, highlighting relevant capabilities and patent evidence.*

■ Patent and Product Overlap

Product	Patent ID	Patent Summary	Overlap Context
Lumicene M 5222	EP2110406A1	Polyethylene and poly(hydroxy carboxylic acid) blends	Enhances properties like dimensional stability and stress-cracking resistance.
Lumicene M 5222	EP2360192A1	Caps and closures made from bimodal HDPE using metallocene catalysts	Discusses the use of metallocene catalysts to improve mechanical properties.
Lumicene M 5222	US7034092B2	Process for producing bimodal polyethylene resins	Outlines processes that enhance polyethylene properties relevant to Lumicene M 5222.
Lumicene M 5222	US7220806B2	Process for increasing ethylene incorporation into random copolymers	Contributes to the mechanical properties of the product.
Lumicene M 5222	US8420194B2	Rotomoulded articles prepared with polyethylene	Focus on mechanical properties aligns with Lumicene M 5222's capabilities.
Totalenergies-European Product Range-2025 - Food Packaging (Extrusion Sheet Thermoforming)	EP2110406A1	Polyethylene and poly(hydroxy carboxylic acid) blends	Relevant for transparency and rigidity properties.
Totalenergies-European Product Range-2025 - Food Packaging (Extrusion Sheet Thermoforming)	EP2360192A1	Caps and closures made from bimodal HDPE using metallocene catalysts	Relevant for mechanical properties in food packaging applications.
Totalenergies-European Product Range-2025 - Polyethylene Main Properties Typical Applications	US7034092B2	Process for producing bimodal polyethylene resins	Relevant for the production of polyethylene with specific properties.
Totalenergies-European Product Range-2025 - Food Packaging (Extrusion Blow Molding)	EP2110406A1	Polyethylene and poly(hydroxy carboxylic acid) blends	Relevant for properties like aesthetics and migration resistance.
Totalenergies-European Product Range-2025 - Food Packaging (Extrusion Blow Molding)	EP2360192A1	Caps and closures made from bimodal HDPE using metallocene catalysts	Relevant for mechanical properties in packaging applications.
Totalenergies-European Product Range-2025 - Polystyrene Complete Range	US20080275198A1	Random olefin copolymers	Discusses methods for producing olefin copolymers that can enhance properties relevant to polystyrene.
Totalenergies-European Product Range-2025 - Food Packaging (Injection)	US7034092B2	Process for producing bimodal polyethylene resins	Relevant for injection molding processes.

Product	Patent ID	Patent Summary	Overlap Context
Totalenergies-European Product Range-2025 - Consumer Packaging (Extrusion Blow Molding)	EP2110406A1	Polyethylene and poly(hydroxy carboxylic acid) blends	Relevant for properties like transparency and migration resistance.
Totalenergies-European Product Range-2025 - Polypropylene Main Properties Specific Features Typical Applications	EP2360192A1	Caps and closures made from bimodal HDPE using metallocene catalysts	Relevant for mechanical properties and processing characteristics.
Totalenergies-European Product Range-2025 - Medical	EP2110406A1	Polyethylene and poly(hydroxy carboxylic acid) blends	Relevant for medical-grade applications and compliance with pharmacopoeia.
Totalenergies-European Product Range-2025 - Polyethylene Main Properties Specific Features Typical Applications	US7034092B2	Process for producing bimodal polyethylene resins	Relevant for specific properties in various applications.
Totalenergies-European Product Range-2025 - Polypropylene Complete Range	US8420194B2	Rotomoulded articles prepared with polyethylene	Relevant for mechanical properties in polypropylene applications.
